Collective Intelligence

Essential Question

*What are the benefits and drawbacks of people working together to create information online?*

Lesson Overview

Students analyze the statement, “The whole is better than the sum of its parts,” as a springboard to understanding the concepts of synergy and collective intelligence. They consider both the benefits and drawbacks of using collective intelligence in different contexts. Students work in groups to develop materials for a website about their school, and then compare their experiences.

Learning Objectives

*Students will be able to …*

- learn about the concept of collective intelligence, and how it works both online and offline.
- consider when collective intelligence may be valuable or not.
- explore the benefits and drawbacks of working as a team to create new information or products.

Materials and Preparation

- Copy the *MySchool Student Handout*, one for each group of four or five students.
- Preview the PhilaPlace website (www.philaplace.org) and be prepared to explore it with students.
- Butcher paper, or computers with access to Google Docs (docs.google.com) as a high-tech option.

Family Resources

- Send home the *Wikipedia Family Tip Sheet (Middle & High School)*.

Note: This lesson focuses on collective intelligence, which is best exemplified by projects such as Wikipedia and user reviews on sites such as Yelp. In addition, there are many examples of online social activism and civic engagement. These are also valid ways for people to collaborate on the Web, but they are not the focus of this lesson.
Warm-up (10 minutes)

**DEFINE** the Key Vocabulary term **synergy**.

**HAVE** students consider the following statement by the ancient Greek philosopher Aristotle: “The whole is greater than the sum of its parts.”

**ASK:**

**What is meant by this phrase?**

Several things working together – in synergy – can produce something bigger or better than they could if they worked separately.

**How does this phrase apply to teamwork or collaboration?**

A team can create something better than its members could produce working individually.

**What are some instances demonstrating this phrase is true?**

Sample responses:

- Producing a movie. It requires the skills of a screenwriter, director, editor, and many other personnel, all doing their parts according to their particular skills.
- Building a winning baseball team. All players have to be skilled – not just one.
- Operating on a patient. Without different types of doctors and nurses doing their jobs, the operation might not be successful.

**Are there any situations when this phrase is untrue?**

Sample responses:

- Experts who have specific knowledge
- Artists painting pictures that reflect their individual vision and creativity
- People responding to a life-threatening situation. Some studies show that “group think” mentality can prevent individuals from taking action. (See “We Are All Bystanders” as background: www.greargood. berkeley.edu/article/ item/ we_are_all_bystanders.)

**INVITE** students to indicate whether the following are good or bad uses of collective intelligence by giving thumbs up or down. There are no right or wrong answers, but call on a few students to explain their answers:

**Is it beneficial when many people work together to ...**

- write a novel?
- write reviews of a novel?
- take a photo?

**or**

- publish a newspaper?
- solve a math problem?
- build a bridge?
(Based on “The Dumbness of Crowds” by Kathy Sierra, July 2007 (www.headrush.typepad.com/creating_passionate_users/2007/01/the_dumbness_of.html).)

**teach 1**

**Explore Collective Intelligence** *(25 minutes)*

**DEFINE** the Key Vocabulary term **collective intelligence**.

**EXPLAIN** to students that there are growing opportunities for people to collaborate online through collective intelligence. On the Internet, people can collaborate without being in the same place, and even without knowing each other.

**INVITE** students to consider the following types of collective intelligence: 1. wikis that allow anyone to create and edit public Web entries, 2. public contests to answer problems or create products, and 3. websites that allow you to see reviews from other users. Tell students that they will consider the benefits and drawbacks of collective intelligence.

**SHOW** students PhilaPlace (www.philaplace.org), an interactive map made by the Historical Society of Pennsylvania. It allows ordinary people to add their histories and stories about the city of Philadelphia. Many websites are created by an expert or an organization considered an authority on the topic. PhilaPlace, however, was created collaboratively by regular people. It is a good example of collective intelligence.

**EXPLORE** the site with your students. Browse different text, photos, video clips, and podcasts that users have uploaded.

**ASK:**

**What are some of the pros and cons of creating a website like this with a large group of ordinary people?**

Samples responses:

- Pros are that it can be fun, a wider variety of ideas might emerge, and the audience may get a broader perspective.
- Cons are that messages can be fragmented or unclear, the work might take longer with so many voices, and the information may not be as accurate as that of experts.

**teach 2**

**Tell Your Stories** *(15 minutes)*

**DEFINE** the Key Vocabulary term **wiki**.

**EXPLAIN** to students that they are now going to create materials for a wiki about their school. (Note: Explain that they will create a mock wiki if they are using butcher paper, or a real wiki if they are using Google Docs). The wiki they create should include images and text that show outsiders what their school is like. They will be working in groups to develop the wiki, and they will be asked to answer questions about the experience of collaborating.

**ARRANGE** students into groups of four or five.

**DISTRIBUTE** the **MySchool Student Handout**, one for each group, and sheets of butcher paper. Allow students 10 to 15 minutes to design their websites and answer the questions on the handout. Students can create their collections of images and stories using Google Docs (www.docs.google.com).
teach 3

Share Your Story (10 minutes)

INVITE students to share the images and text they chose for their MySchool website. Have volunteers respond to the questions on the MySchool Student Handout.

DISCUSS the following questions as a class.

ASK:

What were some of the similarities and differences between what the groups created to represent the school? What do you think these similarities and differences tell you?

Answers will vary, but students should recognize that the choices represent the perspective of the group that chose the materials for each MySchool site.

What do you think would be the benefits of working on your MySchool site in a group, as you did, versus by yourself? What might some of the drawbacks be?

Sample responses:

• Benefits: Groups could produce more material than someone could produce working alone; groups could tap into more areas of school life because different group members have had different experiences.

• Drawbacks: Groups might find it harder to decide what to include, because they had to collaborate and reach a consensus with others.

How might this assignment have been different if a school administrator or an expert who had studied the school had created the materials for the MySchool website, instead of teens who attend the school?

Sample responses:

• There might have been more emphasis on adults and how the school is run.

• There might have been more facts and history about the school that people who run schools tend to collect.

In what way did this assignment relate to the idea of collective intelligence?

Students were demonstrating collective intelligence because they were working in a group and were trying to create knowledge about a community from many people’s perspectives. Also, websites about schools are typically created by adults in the school instead of teens, its users. Collective intelligence is often a way to pool knowledge from users and ordinary people, which provides a variety of perspectives.
Wrap-up (5 minutes)

You can use these questions to assess your students’ understanding of the lesson objectives. You may want to ask students to reflect in writing on one of the questions, using a journal or an online blog/wiki.

ASK:

What is collective intelligence, and what are some offline and online examples of it?

Students should understand that collective intelligence is knowledge collected from many people towards a common goal.

Offline examples:
• Doing a group project
• Making a movie
• Publishing a newspaper

Online examples:
• Wikis that allow anyone to create and edit public Web entries
• Public contests to answer problems or create products
• Websites that allow people to see reviews from other users

What are examples of when collective intelligence can be beneficial? When might it be a drawback?

Samples responses:
• It can be beneficial for creating something that requires a variety of expertise.
• It can be beneficial if you want to get many people’s perspectives on the same topic.
• It might be a drawback if a particular type of expertise is needed.
• It might be a drawback if decisions need to be made quickly.

What future projects might you do in school or outside that could benefit from pooling the knowledge and expertise of many people? Why?

Answers will vary, but they should reflect students’ understanding of the benefits and drawbacks of collective intelligence in various contexts.

Extension Activity

Have students work in groups to learn more about Wikipedia, the international encyclopedia created entirely through collective intelligence. (Note: A study in the journal Nature showed that Wikipedia was about as reliable as the Encyclopedia Britannica (www.news.cnet.com/2100-1038_3-5997332.html). Nevertheless, many students overrely on Wikipedia. Point out that Wikipedia is a great tool, but that it should be used only as a starting point for research.)
Students can read the “About” page on Wikipedia (www.en.wikipedia.org/wiki/Wikipedia:About), and from there click through the link to the “Five Pillars,” or fundamental principles, under which Wikipedia operates (www.en.wikipedia.org/wiki/Wikipedia:Five_pillars). Have groups come up with two benefits and two drawbacks of having this kind of collaboratively written information source, and share their conclusions with the class.

Sample responses:

**Benefits**

- With thousands of contributors, Wikipedia contains more information on more subjects than any individually authored book or website ever could.
- Because people can edit one another’s work, most errors on Wikipedia will eventually be corrected.
- Most Wikipedia entries cite their sources, so it is a good place to find other materials on any given subject.

**Drawbacks**

- Since anyone can edit a Wikipedia entry, you are not always reading work by an expert.
- There may be errors on the site that have not yet been corrected, so you need to check the information with a second source.

**At-Home Activity**

Have students choose a favorite book. They should first look for an online newspaper review or blog post about it by a professional critic, and then find a handful of reviews of the book from ordinary users at a site such as Amazon.com or Goodreads.com. Then ask them to answer the following questions:

**Do you trust the critic’s review more than the general sense you get from the site’s users? Why or why not?**

Answers will vary, but guide students to think about whether the stated expertise of the reviewer makes a difference. Also have students consider how having one person’s opinion versus many is beneficial or a drawback.

**What biases might user reviewers have that a critic might not, and vice versa?**

Guide students to consider the motivations of users who write reviews. Maybe those who are unhappy write more often. On the other hand, there are articles about how some people are paid to write reviews, and such reviews would likely be more positive.
Directions

You have browsed the website PhilaPlace (www.philaplace.org), where people can add their histories and stories about the city of Philadelphia. Now it’s your turn! You will be choosing materials for a paper or electronic wiki about your school. Your job is to think of images and stories for the wiki that tell the story of your school community from your point of view.

Follow these steps to choose the materials for your wiki:

1. Have each person in the group think of three things to include on the website. Work on your own, and write down your choices.

2. Share your choices with one another. Then work together to choose the ten best things to include on your website.

3. Once you have chosen your materials, work together to decide how you will arrange them and what your wiki will look like. Then choose a name for your wiki.

4. Answer the questions below.

Questions

1. How did you come up with ideas for images and stories for your website?

2. How did you decide which images and stories to include?
3. Was it difficult or easy to make the decisions? Explain your answer.

4. Whose perspective is reflected in the materials you chose?

5. How do you think the results might have been different if you were working as an individual instead of in a group?
1. Which of the following is not an example of collective intelligence?
   a) A website that allows users to rate and review restaurants
   b) A man blogging about things he has cooked
   c) A group of hikers using a wiki to make a list of supplies they will need for their trip

2. “Collective intelligence” means:
   a) The intelligence of machines and robots
   b) Knowledge collected from many people towards a common goal
   c) A smart way to collect items you like

3. True or false: Collective intelligence is a term that only describes people working together online, not offline.
   a) True
   b) False
1. Which of the following is not an example of collective intelligence?

a) A website that allows users to rate and review restaurants
b) A man blogging about things he has cooked
c) A group of hikers using a wiki to make a list of supplies they will need for their trip

*Answer feedback*

The correct answer is b. A man blogging by himself doesn’t involve a group of people working together, so it is not an example of collective intelligence.

2. “Collective intelligence” means:

a) The intelligence of machines and robots
b) Knowledge collected from many people towards a common goal
c) A smart way to collect items you like

*Answer feedback*

The correct answer is b. “Collective intelligence” describes the ways people work together to share ideas or create something new.

3. True or false: Collective intelligence is a term that only describes people working together online, not offline.

a) True
b) False

*Answer feedback*

The correct answer is b, False. Although the Internet can make it easy for people to share knowledge or create something new, people also collaborate – or work together – offline too.
